Prime 32 With Bovatec

Do you have some replacement heifers or growing beef cattle that could use some supplemental nutritional supplementation? If the answer is yes, than please consider Prime 32 % with Bovatec. This unique liquid feed is designed for lick tanks or TMR use.

When this product was originally developed, several research trials were submitted to the U.S Food and Drug administration. Westway had to demonstrate that the intake on a lick tank fell within a stated range and that the product increased average daily weight gain in cattle. This product proved to be safe with feed intake staying within the stated range and increased average daily gains by 13 .1 % vs. controls. In addition, the heifers offered the Prime 32% with Bovatec gained an additional 1.1 inches of height in the 90 day study. In one of the trials, heifers on Prime 32 with Bovatec gained 1.67 pounds/hd./day vs. controls that gained 1.15 pounds. The additional weight gain was .52 pounds per head per day. Just think what that is worth in today's cattle market!

One of the unique features of Prime 32 with Bovatec is the process used to make it. Unlike other liquid feeds, the urea and molasses are heated for 6 hours. This methodology significantly reduces the break -down of urea in the rumen. The slow release urea safer to feed and better utilized by the rumen bacteria vs. competitive liquid feed products.

This fall follow the Badgers and Packers and give your cattle a boost with Prime 32 with Bovatec. Call us today for more information. 608-943-8008
